Forecast for Thursday 07 Dec 2023

Weather: Strong winds and outbreaks of rain spreading to all areas through the morning, wintry above around 500-600m at first but tending to turn to rain at all heights as the freezing level rises into the day. Patchy rain continuing on and off for much of the morning, always heaviest for southern facing slopes given the strong south-southeasterly winds. Rain becoming more persistent and heavy during the afternoon, before slowly clearing west into the evening to leave a somewhat drier end to the day with slightly lighter winds. A Met Office Yellow warning for Rain is in force for parts of the west of the region through the day, please see the Met Office website for further details and the latest updates.

Chance of cloud-free hill tops above 600m: 10-20%, with the best chance of clearer spells to the lee of high ground.

Low Cloud and visibility: Broken low cloud above around 300-400m for much of the day in association with the rain. Visibility generally moderate in rain, poor in early snow and locally very poor in cloud.

Freezing Level*	1500m	2000m	2000m	2000m	1700m	1400m	1300m

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

A poor weather day up on the hills, particularly when exposed to those strong south-easterly winds. Turning somewhat milder than recent times but some severe wind chill and poor visibility likely at height and appropriate equipment vital.

Recent rainfall: measured at Malham: altitude 375m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
03:00 on Thu 07 Dec 2023	0.4mm	3.2mm	15.4mm

Forecast for Friday 08 Dec 2023

Weather: Thursday's rain clearing overnight to leave a generally drier, brighter start to Friday. Outbreaks of showery rain spreading east to all areas through the morning however, locally heavy at times, with strong southerly to south-westerly winds persisting.

Maximum wind: Southerly to south-westerly 20-25mph, gusting 30-35mph.

Chance of cloud-free hill tops above 600m: 40% to start, becoming 20% through the morning.

Low Cloud and visibility: Patchy cloud above around 200-300m to start, this tending to lift somewhat but thicken into the day, becoming broken above 400-500m. Visibility generally good but moderate in showers and locally very poor in cloud.

Temperature: **Valleys:** 5 Celsius, becoming 7 Celsius.
At 600m: 3-4 Celsius.
Freezing level: 1400m becoming 1800m.
